PROFESSIONAL SUMMARY

Full Stack Developer who completed a professional internship at RavanTech as the sole owner of the mobile app for a conversational AI product: 25 merged pull requests in four months on a Flutter codebase built with Clean Architecture. I work with Flutter/Dart, TypeScript/Node.js and Kotlin, with hands-on experience in REST APIs, secure authentication (JWT, Supabase, Row Level Security), PostgreSQL and CI/CD with GitHub Actions and Docker. Seventh-term Software Engineering student looking to join a development team with a product in production.

PROFESSIONAL EXPERIENCE

Mobile Developer (Flutter) — RavanTech · Kotoba Squad **May – Aug 2026**
Professional internship · Flutter, Dart, Riverpod, go_router, Dio, Supabase, GitHub Actions

- Built the Kotoba mobile app end to end (learning Mandarin and English through voice conversations with an AI agent), defining the project architecture: Clean Architecture with Feature-First organization and Riverpod as the single state manager.
- Implemented the full voice conversation cycle: push-to-talk recording, multipart upload with Dio, idempotency keys, exponential-backoff retries on 5xx errors and playback of the response audio.
- Integrated authentication and persistent sessions with Supabase, onboarding with a profile protected by Row Level Security, and four-state route access control with go_router.
- Set up the continuous integration pipeline in GitHub Actions (static analysis and tests) as a required check for merging, with a unit and widget test suite using mockito.
- Designed the app's visual system on Material 3 with semantic tokens and ThemeExtension, which allowed every screen to be redesigned across five deliveries without changing business logic.

FEATURED PROJECTS

Readflow — AI learning platform · readflow.lat · Backend Developer **Mar 2026**
Node.js, TypeScript, Express, PostgreSQL, Prisma ORM, Gemini AI, Docker, AWS EC2, GitHub Actions

- Spaced-repetition REST API with automatic generation of personalized assessments through Gemini AI and a grading engine for three exercise types.
- Authentication with JWT and rotating refresh tokens in httpOnly cookies (XSS/CSRF protection), PostgreSQL triggers for streaks and cron jobs for reminders. Deployed with CI/CD.

Anthropometric System for Bariatric Physicians · Backend Developer **Nov 2025**
Ktor (Kotlin), PostgreSQL, Angular

- Ktor backend with anthropometric calculations for clinical records and API integration with the Angular frontend.

FinanzApp — Personal finance manager · Full Stack Mobile Developer **Nov 2025**
Kotlin, Jetpack Compose, Firebase Firestore, Firebase Auth

- Native Android app for shared expense management, with real-time sync and automatic splitting of group expenses.

TECHNICAL SKILLS

Mobile Flutter · Dart · Riverpod · go_router · Dio · Kotlin · Jetpack Compose
Backend & APIs Node.js · Express · TypeScript · Ktor · REST · Python
Databases PostgreSQL · MySQL · Prisma ORM · Supabase · Firebase Firestore · Advanced SQL
DevOps & Cloud Docker · GitHub Actions CI/CD · AWS EC2/RDS · Render · Git
Other React · Next.js · LLM APIs (Gemini AI) · Testing (mockito, widget tests) · Postman · Linux

EDUCATION & CERTIFICATIONS

B.S. in Software Engineering — Universidad Politécnica de Chiapas · 7th term **Aug 2024 – Present**
Certifications AWS Academy Cloud Foundations (Amazon Web Services) · Python Programming Fundamentals (UPChiapas)
Languages Spanish (native) · English (intermediate)
